DETAILED ACTION

Continued Examination Under 37 CFR 1.114

1. A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on 10/13/09 has been entered.

Claim Rejections - 35 USC § 103

2. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

3. Claims 1-6 are rejected under 35 U.S.C. 103(a) as being unpatentable over Freeman et al (2002/0188943) in view of Rainville et al (2002/0069411) for the same reasons as set forth in Section 8 of the previous office action, dated 10/15/08.

With respect to the newly added limitations, Freeman et al already discloses the concept of such common viewing of the event at any time during the event, such that selecting a particular camera angle from the variety of camera angles directly changes from the current camera angle to the particular camera angle at the time of selecting the particular camera angle (e.g. camera angles/options).

Response to Arguments

4. Applicant's arguments filed 10/13/09 have been fully considered but they are not persuasive. Applicant asserts on page 8 of the Remarks that the office action dated 7/24/09 raise possible confusion. However, as stated paragraph 3 of that OA, Freeman et al discloses all the means in Figure 1 to identify the camera angle images. [0032]-[0050] of Freeman et al discloses such on-screen functions as illustrated in Figure 1.
